Flame Monitoring Device F130I.

Technical data

Flame monitoring device F130I

Item number	659G1001 (230VAC) 659G1002 (120VAC)	Dimensions [mm]	See dimensional drawings
Application	Monitoring of flames (ignition or main flame) using the ionisation method.	Material	Plastic
Power supply voltage	230 VAC +10% -15% or 120 VAC +10% -20%	Weight [kg]	0.5
Power consumption	≤ 10 VA	Protection class	IP20
Output contact status signal	Not safety-oriented, potential-free contact	Ambient temperature	- 20 ... + 60°C
Flame signal output contact	Safety-oriented floating contact	Approval	UL, CE, SIL 3, UKCA
FFDT (Flame failure detection time)	230 V 1 s 120 V 3 s

Flame Monitoring System F350 + FFS30

Flamescanner Remote Software (FRS)

- Connection to the PC via FSB/USB module and adapter cables.
- The flamescanner remote software allows you to set all parameters. In addition, it also offers analysis, data backup and recording functions.
- In addition to the flame scanner data, you can also connect up and record external, analogue and/or digital data by means of FSB modules. All of the data is synchronised.

Brackets

General Information about the Brackets.

Valid for all Brackets in this Document

- Purging air must be free from oil and dirt.
- Recommended operating pressure: > 50 mbar above the internal combustion chamber pressure
- Recommended cooling air temperature: min. 20 K below the allowed device temperature
- Recommended air consumption: 5 m³/h
- All weight specifications based on the Brackets without sensor mass
- Length tolerance (total length l) in the technical data: ± 5
- Connection threads other than those described here on request

Specifically for FV30-00, FV30-10, FV40-10, FK41, FK46 and the corresponding stainless steel variants:

Purge air / boiler pressure with dismantled flame scanner: p max. = 0.5 bar.

FV30-15 and with FV40-15

Because of an additional optimisation of the lock washer socket on the screwed body of the bracket, the lock washer socket can withstand a pressure of max. 4 bar from the boiler when the flame scanner is disassembled.

- FV30-10 Threaded connection with purge air coupling / FV30-11 (stainless steel)
- FV30-15 Threaded connection with purge air coupling for 4 bar
- FV40-10 Threaded connection with purge air coupling and globe joint / FV40-11 (stainless steel)
- FV40-15 Threaded connection with purge air coupling and globe joint for 4 bar
- FR20-01 Bracket with 90° deflecting mirror
- FK30 Cooling air housing
- FK41 Cooling air housing with purge air coupling and globe joint
- FK46 Cooling air housing with purge air coupling and FS35 (detachable bracket)

Threaded connection FV30-00 and FV30-01 (stainless steel)

Threaded connection with purge air coupling FV30-10 and FV30-11 (stainless steel)

Threaded connection with purge air coupling and globe joint FV40-10 and FV40-11 (stainless steel)

Cooling air housing FK30

Cooling air housing with purge air coupling and globe joint FK41

Cooling air housing with purge air coupling and FS35 - FK46

FR20-01 Bracket with 90° deflecting mirror

Assignment of Brackets to Flame Scanners.

Brackets for FFS07

- FV30-00 Threaded connection / FV30-11 (stainless steel)
- FV30-10 Threaded connection with purge Air coupling
- FV40-10 Threaded connection with purge Air coupling and globe joint
- FR20-01 Bracket with 90° deflecting mirror
- FH30-00 Plug-in bracket
- FH30-10 Plug-in bracket and purge Air coupling
- FH40-10 Plug-in bracket with purge Air coupling and globe joint
- FS30 Cooling air housing
- FS36 Cooling air housing with bracket, detachable, adjustable
- FS41 Cooling air housing and globe joint

Brackets for FFS08

- FS60-00 Bracket
- FS60-10 Bracket
- FS65 Cooling air housing
- FH80-00 Bracket
- FH80-10 Bracket

Brackets for FFS30

- FV30-00 Threaded connection / FV30-01 (stainless steel)
- FV30-10 Threaded connection with purge air coupling / FV30-11 (stainless steel)
- FV30-15 Threaded connection with purge air coupling for 4 bar
- FV40-10 Threaded connection with purge air coupling and globe joint / FV40-11 (stainless steel)
- FV40-15 Threaded connection with purge air coupling and globe joint for 4 bar
- FR20-01 Bracket with 90° deflecting mirror
- FS30 Cooling air housing
- FS36 Cooling air housing with bracket, detachable, adjustable
- FS41 Cooling air housing and globe joint

Brackets for F200K

- FV30-00 Threaded connection / FV30-01 (stainless steel)
- FV30-10 Threaded connection with purge Air coupling / FV30-11 (stainless steel)
- FV30-15 Threaded connection with purge Air coupling for 4 bar
- FV40-10 Threaded connection with purge Air coupling and globe joint / FV40-11 (stainless steel)
- FV40-15 Threaded connection with purge Air coupling and globe joint for 4 bar
- FH30-00 Plug-in bracket
- FH30-10 Plug-in bracket and purge Air coupling
- FH40-10 Plug-in bracket with purge Air coupling and globe joint
- FR20-01 Bracket with 90° deflecting mirror
- FS50 Cooling air housing
- FS51 Cooling air housing and globe joint
- FS56 Cooling air housing with bracket, detachable, adjustable

Brackets for F300K

- FV30-00 Threaded connection and FV30-01 (stainless steel)
- FV30-10 Threaded connection with purge Air coupling / FV30-11 (stainless steel)
- FV30-15 Threaded connection with purge Air coupling for 4 bar
- FV40-10 Threaded connection with purge Air coupling and globe joint and FV40-11 (stainless steel)
- FV40-15 Threaded connection with purge Air coupling and globe joint for 4 bar
- FR20-01 Bracket with 90° deflecting mirror
- FK30 Cooling air housing
- FK41 Cooling air housing with purge Air coupling and globe joint
- FK46 Cooling air housing with purge Air coupling and FS35 (detachable bracket)

Performance characteristic Cooling air housing FS50

Read-out examples:

- Ambient temperatures up to 55 °C do not require a cooling air housing.
- Starting from 55 °C, cooling is recommended and starting from 60 °C, cooling is mandatory.
- At a cooling air temperature of 15 °C, a volumetric flow of 5 m³/h is sufficient up to 65 °C because an internal operating temperature of 85 °C is not exceeded in the device.
- Up to 70 °C, compressed air is possible with 7.5 m³/h and up to 75 °C in the ambient air, 10 m³/h compressed air can be reached.

Performance characteristic Cooling air Housing FK30

- A = Operating temperature / internal device temperature [°C]
- B = Ambient temperature [°C]
- C = Uncooled range
- D = Limit of cooling requirement
- E = Maximum permissible operating temperature
- F = Application temperature range FK30

Performance characteristics cooling air housing FK30 at cooling air temperature 15 °C

Read-out examples:

- Ambient temperatures up to 75 °C do not require a cooling air housing.
- Starting from 75 °C, cooling is recommended and starting from 80 °C, cooling is mandatory.
- At a cooling air temperature of 15 °C, a volumetric flow of 5 m³/h is sufficient up to 85 °C because an internal operating temperature of 85 °C is not exceeded in the device.
- Up to 90 °C, compressed air is possible with 7.5 m³/h and up to 100 °C in the ambient air with 10 m³/h.

- A = Operating temperature / internal device temperature [°C]
- B = Ambient temperature [°C]
- C = Uncooled range
- D = Limit of cooling requirement
- E = Maximum permissible operating temperature
- F = Application temperature range FK30

Flamescanner Remote Software.

Flamescanner Remote Software

The flamescanner remote software is used to record and a graphic display of flame data chronologically recorded by the F300K / F350. This data can be analysed and optimal settings for the flame scanner can subsequently be determined. Additionally, the software of the user interface (UI) of the F300K UI and/or the FB30 is integrated, which allows for the identical operation and parameter setting of the F300K / F350.

- Connection to the PC via FSB/USB module and adapter cables.
- The flamescanner remote software allows you to set all parameters. In addition, it also offers analysis, data backup and recording functions.
- In addition to the flame scanner data, you can also connect up and record external, analogue and/or digital data by means of FSB modules. All of the data is synchronised.
- The data is exchanged via FSB (FLAME SCANNER SYSTEM BUS).
- Compatible with F300K and FFS30

FSB gateway

- An interface to the control technology can be implemented via the FSB gateway.
- Data from one or from up to 32 F300K devices can easily be sent via a control technology field bus.

FSB gateway is available for the following field buses:

- PROFIBUS (Slave)
- MODBUS TCP (Client/Server)
- MODBUS RTU (Master/Slave)
- Ethernet (Frame)
- CANopen

FSB-Gateway

Repeater

- One repeater is required for a total FSB line length of over 80 m.
- Via the use of multiple repeaters, up to 32 flame scanners with a line length of several 100 m can be coupled via a bus system.

The ... /V optics holders are conductively bonded with the 200K housing. This results in that it is difficult to loosen the optics holders from the housing and sometimes not possible without damage. When mounting a new optics holder, make sure that it is conductively bonded with the F200K housing again.
